Company Instruction

SK hynix is specialized in producing semiconductor, specifically such as DRAM, NAND Flash and CIS loaded on PCs, servers, smartphones, tablets, digital TVs and so on. On 2017 base, SK hynix is 2nd largest memory chip maker and ranked 3rd in the global semiconductor market with its outstanding technology competence and advanced products. It is also at the forefront of the future world IT industry as it records excellent results in emerging markets and China, which is the biggest semiconductor market.

The global demands for semiconductor have been rapidly increasing according to the mobility of digital network, smart digital devices and the enhancement of digital contents. SK hynix is to provide the best products and to develop the most advanced solutions which lead this digital world. SK Hynix is aiming for the 'world's best memory semiconductor solution company' as a leader in the global ICT industry by maximizing its business competence and diversifying the business portfolio.
